

Project Planning Report

- **Team Members:**

1. Zhichao Chen, zhichaochen@ucla.edu
2. Jialong Chen, cain011231@g.ucla.edu
3. Jon Paino, jonpaino@g.ucla.edu

- **Research Topic:**

- Cross-Cultural Social Acceptability Classification: Enhancing Model Performance Across Diverse Contexts via Human Feedback
 - Background: Social acceptability classification (SAC) is essential for identifying whether a response or interaction is appropriate within a given context, which is critical in providing a good user experience in LLM applications. For example, a response considered polite or acceptable in one culture (e.g., direct criticism in Western contexts) may be perceived as rude or inappropriate in another (e.g., East Asian contexts emphasizing indirect communication).
 - Objective:
 - Evaluate how well existing models perform on culturally diverse acceptability tasks
 - Investigate how human-defined cultural context and feedback can improve model predictions
 - Develop methods to enhance model adaptability across different cultural norms

- **Distribution of Work:**

- Literature Survey: All team members (Week 4)
- Dataset Construction & Annotation: All team members (Week 5)
- Model Evaluation (Baseline + Prompting): Zhichao Chen (Week 6)
- Analysis & Visualization: Jialong Chen (Week 7)
- Investigating Improvement Methods: Jon Paino (Week 8)
- Report Writing & Presentation: All team members (Week 9-10)
